

## Summary

The Xilinx® Kria™ KV260 Vision AI Starter Kit is comprised of a non-production version of the K26 system-on-module (SOM), carrier card, and thermal solution. The SOM is very compact and only includes key components such as a Zynq® UltraScale+™ MPSoC based silicon device, memory, boot, and security module. The carrier card allows various interfacing options and includes a power solution and network connectors for camera, display, and microSD card. The thermal solution has a heat sink, heat sink cover, and fan. The Kria KV260 Vision AI Starter Kit is designed to provide customers a platform to evaluate their target applications and ultimately design their own carrier card with Xilinx K26 SOMs. While the SOM itself has broad AI/ML applicability across markets and applications, target applications for the Kria KV260 Vision AI Starter Kit include smart city and machine vision, security cameras, retail analytics, and other industrial applications.

## Product Details

The Kria KV260 Vision AI Starter Kit is an evaluation platform for the K26 SOM focused on machine learning (ML) acceleration in vision applications. The kit brings together a Zynq UltraScale+ MPSoC based SOM with user selectable, vision focused peripherals and a set of pre-built accelerated applications. The KV260 and its base K26 SOM are supported for full user customization through Vitis™ platforms, customizable acceleration overlays, and Vivado® tools hardware board files. The integrated combination of hardware, platform, and software provides a quick out-of-box experience for developers that can then be leveraged for product designs.

Xilinx is creating an environment where employees, customers, and partners feel welcome and included. To that end, we're removing non-inclusive language from our products and related collateral. We've launched an internal initiative to remove language that could exclude people or reinforce historical biases, including terms embedded in our software and IPs. You may still find examples of non-inclusive language in our older products as we work to make these changes and align with evolving industry standards. Follow this [link](#) for more information.

### KV260 Starter Kit Power On Sequence

1. External power adapter supplies 12V power
2. On-board regulator generates 5V supply and provides power to other voltage regulators
3. SOM power rail ( $V_{CC\_SOM}$ ) is powered by a 5V supply
4. When the 5V regulator output voltage level is within the specified range and a power-good signal is asserted and the `POWER_OFF_C2M_L` signal is deasserted by the carrier card
5. SOM on board power on sequencing starts
6. Carrier card provides PS and PL  $V_{CCO}$  voltage rails after the SOM asserts the  $V_{CCOEN\_PS\_M2C}$  and  $V_{CCOEN\_PL\_M2C}$  signals

### KV260 Starter Kit Power On Reset

1. The SOM reset signal (`PS_POR_L`) is held in reset until the `PS_PGOOD` signal is asserted.
2. To perform a hard reset on the SOM, use the reset push-button on the carrier card to assert the `PS_POR_L` signal.
3. All the PS and PL I/O device reset signals on the carrier card are held in reset until 25 ms after the PS and PL power domain are powered up and stable.
